

Why Indexed I/O Is Better Than Other eDiscovery Solutions

Intuitive Interface & Easy to Use

Indexed I/O is a true DIY, intuitive platform. Users can get up and running in minutes, without ever talking to a sales rep or ever utilizing a project manager.

Scalable

Indexed I/O's "auto-scale" technology cuts traditional processing times from days to minutes while ensuring quick, accurate results every time.

Fast

With unmatched search speeds, you always have instant access to the critical items you need for your case.

Cost Effective

It's easier for users to budget due to a pay-as-you-go pricing model. There are no long-term restricting contracts, no licensing fees, and no minimums.

Daily Hosting Model

Indexed I/O is the only eDiscovery solution that offers a Daily Hosting Model. This allows for more predictable billing, easier project management, and eliminates 'minimum' hosting charges.

API Integration

Developers can quickly integrate powerful processing, analytic, search, export, and production technologies into their own or third-party technology solutions.

Free Training and Exceptional Customer Service

Training is always free, and all customers receive full support with their Indexed I/O account. This includes technical support, 24x7 access to Indexed I/O documentation, white papers, and knowledge base.

One-Click Document Translation

Translate over 100 foreign languages to English with just one-click of a button.

Built-in Data Enrichment Services

Indexed I/O has integrated with a secure and confidential third-party technology that provides enriched data on specific email address values.

Free iPad Review App

With the free Indexed I/O mobile app, users can review, code, redact, and organize their eDiscovery documents right at their fingertips.
